(54) Title: AN INTEGRATED WASHING AGENT DISPENSER, IN PARTICULAR FOR A DISHWASHER

(57) Abstract: The device (1) can be used in particular for the pivotable door of a dishwasher and comprises, in a structure or body (2) a first dispenser device (5, 6) for a washing agent, and a second dispenser device (4) for rinse agent, an electrically controlled actuator device (20, 21) connected to the first dispenser device (5, 6) in such a way that when the door is closed, a first excitation of the actuator device (20, 21) causes substantially only washing agent to be dispensed, and connected to the second dispenser device (4) by means of a transmission mechanism (22, 23) which includes a pivotable interconnecting element (23). The interconnecting element (23) is able to make the mechanism (22, 23) inoperative when the door of the dishwasher is opened, and to make it operative after a first excitation of the actuator device (20, 21) after the door has been closed. One end (23a) of this interconnecting element (23) is pivoted directly onto a movable control member (18) of the second dispenser device (4).
